

# Whop OAuth - Quick Fix Checklist

---

## Immediate Action Required

---

### 1. Verify Whop Redirect URL (90% Fix Rate)

**Go to:** Whop Developer Dashboard → Apps → CatchBarrels → OAuth Settings

**Ensure ONLY this URL exists:**

```
https://catchbarrels.app/api/auth/callback/whop
```

**Remove these if present:**

- `https://catchbarrels.app/auth/login`
- `https://catchbarrels.app/auth/callback`
- `https://catchbarrels.app/api/auth/callback/whop/` (with trailing slash)
- Any `http://` URLs
- Any preview/staging URLs

### 2. Test Login Flow

1. Clear browser cache/cookies
2. Open incognito window
3. Go to: `https://catchbarrels.app/auth/login`
4. Click “Log in with Whop”
5. Approve authorization

### 3. What to Expect

**Success** :

- Redirected to `/dashboard`
- You’re logged in

**Still Failing** :

- Back to `/auth/login?error=OAuthCallback`
- See detailed diagnostic guide: `WHOP_OAUTH_CALLBACK_DIAGNOSTIC.md`

## Current Configuration

---

**App URL:**

```
NEXTAUTH_URL=https://catchbarrels.app
```

**Required Whop Redirect URL:**

```
https://catchbarrels.app/api/auth/callback/whop
```

**Enhanced Logging:**  Deployed

- All OAuth failures are now logged
- Check your deployment logs for `[Whop OAuth]` entries

## Quick Verification

---

- ☐ Redirect URL matches EXACTLY (no typos, no trailing slash)
- ☐ Only ONE redirect URL is registered
- ☐ Client ID and Secret are correct
- ☐ Tested in incognito window
- ☐ Cleared cache/cookies

## If Still Broken

---

Send me:

1. Screenshot of Whop OAuth settings (Redirect URLs section)
2. Server logs showing `[Whop OAuth]` entries
3. Confirmation you removed all other redirect URLs

The enhanced logging will tell us EXACTLY where it's failing!
