

# Whop Redirect URL Fix - Critical Action Required

---

## Issue Summary

---

After user authorizes on Whop, they are NOT being redirected back to CatchBarrels. The OAuth callback never reaches our server.

## Root Cause

---

The redirect URL registered in Whop Developer Dashboard is either:

1. **Missing** - No redirect URL configured
2. **Incorrect** - Points to old preview URL or wrong path
3. **Multiple URLs** - More than one URL registered (Whop may be using wrong one)

## Evidence

---

- **Server Logs:** Zero OAuth callback requests during recent test
  - **Historical Success:** OAuth callbacks worked on Nov 27 (3 days ago)
  - **Conclusion:** Something changed in Whop's configuration
- 

## ✓ Required Fix

---

### Go to Whop Developer Dashboard

1. **Navigate to:** <https://dev.whop.com/>
2. **Click:** Apps → **CatchBarrels**
3. **Click:** **OAuth** tab
4. **Look at:** "Redirect URLs" section

### What You Should See

#### CORRECT Configuration:

```
Redirect URLs:  
https://catchbarrels.app/api/auth/callback/whop
```

#### INCORRECT Configurations:

#### ✗ No URLs Listed

```
Redirect URLs:  
(empty)
```

Fix: Click "+ Add Redirect URL" and add `https://catchbarrels.app/api/auth/callback/whop`

### ✗ Old Preview URL

Redirect URLs:

```
https://105f49d77.preview.abacusai.app/api/auth/callback/whop
https://catchbarrels.app/api/auth/callback/whop
```

Fix: **Remove** the preview URL, keep **ONLY** the catchbarrels.app URL

### ✗ Wrong Path

Redirect URLs:

```
https://catchbarrels.app/auth/login
https://catchbarrels.app/auth/callback
```

Fix: **Remove** these, add **ONLY** `https://catchbarrels.app/api/auth/callback/whop`

### ✗ Trailing Slash

Redirect URLs:

```
https://catchbarrels.app/api/auth/callback/whop/
```

Fix: Remove the trailing `/`

## Take a Screenshot

After making changes, take a screenshot showing:

- The “Redirect URLs” section
- The **exact** URL(s) registered
- The “Save” button (if you clicked it)

## Step 2: Reinstall CatchBarrels App

Whop caches OAuth configuration. You **MUST** reinstall the app:

1. Go to: **Whop Business Dashboard** (not Developer Dashboard)
2. Find: **CatchBarrels** app in your installed apps
3. Click: Three dots ( `:` ) → **Uninstall app**
4. Wait: 10 seconds
5. Reinstall: Use your CatchBarrels installation link

## Step 3: Test Login

1. **Clear browser cache:**
  - Chrome: Settings → Privacy → Clear browsing data → Last hour
2. **Open incognito window**

3. **Go to:** `https://catchbarrels.app/auth/login`
4. **Click:** “Log in with Whop”
5. **Approve** on Whop
6. **Check URL** after redirect:
  -  Success: `https://catchbarrels.app/dashboard`
  -  Still broken: `https://catchbarrels.app/auth/login?error=0AuthCallback`

## Verification Checklist

Before testing, confirm:

- ☐ Only ONE redirect URL registered in Whop
- ☐ URL is exactly: `https://catchbarrels.app/api/auth/callback/whop`
- ☐ No trailing slash
- ☐ No `http://` (must be `https://`)
- ☐ Clicked “Save” in Whop dashboard
- ☐ Uninstalled and reinstalled CatchBarrels app in Whop
- ☐ Cleared browser cache
- ☐ Testing in incognito window

## If Still Broken

Send me:

1. **Screenshot of Whop OAuth Settings**
  - Show the “Redirect URLs” section clearly
2. **Confirmation:**
  - “I removed all other redirect URLs”
  - “I reinstalled the CatchBarrels app in Whop”
  - “I tested in incognito after clearing cache”
3. **Exact URL** in your browser after the error:
  - Copy the full URL from the address bar

## Why This Happens

Whop OAuth requires:

- Exact URL match (no wildcards)
- Single redirect URL per environment
- App reinstall to clear cached credentials

If you’ve redeployed or changed domains, Whop still uses the OLD redirect URL until you:

1. Update it in the Developer Dashboard
2. Reinstall the app

---

## Whop Support (Last Resort)

---

If the above doesn't work, contact Whop:

**Email:** support@whop.com

**Subject:** CatchBarrels OAuth - Redirect URL Not Working

**Body:**

Hi Whop Support,

Our CatchBarrels app (App ID: app\_WkLQSIhlx1uL6d) is experiencing OAuth redirect issues.

After users authorize, they are **not** being redirected back to:  
<https://catchbarrels.app/api/auth/callback/whop>

We've **verified**:

- Only ONE redirect URL registered in Developer Dashboard
- URL is **exactly**: <https://catchbarrels.app/api/auth/callback/whop>
- We've reinstalled the app in our Whop business account
- Our server logs show ZERO callback requests

Can you **verify**:

1. Is our redirect URL active in your system?
2. Are there any cached URLs **for** our app?
3. Do we need to re-verify our app **or** domain?

Thank you!

---

## Summary

---

**Problem:** Whop not redirecting users after authorization

**Root Cause:** Incorrect/missing redirect URL in Whop Developer Dashboard

**Fix:** Update redirect URL + Reinstall app

**Test:** Incognito login to verify

**Next Action:** YOU must access Whop Developer Dashboard and make these changes.
