

# Whop SSO Quick Fix Guide

---

## TL;DR - Do These 3 Things:

---

### 1 Register Redirect URL in Whop

**Go to:** <https://dev.whop.com/> → Apps → CatchBarrels → OAuth Settings

**Add this EXACT URL:**

```
https://catchbarrels.app/api/auth/callback/whop
```

**Remove:** Any other URLs (like `/auth/login` , `/auth/callback` )

---

### 2 Reinstall CatchBarrels App

**Go to:** <https://dash.whop.com/> → Apps → CatchBarrels → Uninstall

**Then:** <https://dev.whop.com/> → Your Apps → CatchBarrels → Install to Business

---

### 3 Test Login

**Browser:** <https://catchbarrels.app/auth/login> → Click “Sign in with Whop”

**Mobile:** Whop App → BARRELS Pro → Open App

---

## What's Already Correct

---

- ✓ NEXTAUTH\_URL = <https://catchbarrels.app>
  - ✓ WHOP\_CLIENT\_ID = `app_WklQSIhlx1uL6d`
  - ✓ WHOP\_CLIENT\_SECRET = `apik_JYqng...`
  - ✓ Code configuration
  - ✓ Middleware
- 

## What's Likely Wrong

---

- ✗ Redirect URL **not** registered in Whop
  - ✗ App needs reinstallation in Whop Business
-

## Screenshots Needed (if still failing)

---

1. Whop Developer Dashboard → OAuth Settings (showing registered URLs)
  2. Browser Console (F12) when clicking “Sign in with Whop”
  3. Network tab (F12) showing the failed request
- 

## Still Not Working?

---
